

FACIAL FILLERS AND INJECTABLES

Beverly Hills Facial Fillers

Dr. Ben Talei offers the best in facial fillers and facial injectables at the Beverly Hills Surgery Center for Plastic & Laser Surgery. These are fantastic non-surgical & non-invasive treatment alternatives to a traditional facelift.

Facial fillers and facial injectables like Botox work to relax and reduce the activity of certain muscles. They are often prescribed for cosmetic purposes, such as raising portions of the face. By relaxing and reducing the activity of the muscles, Dr. Talei can greatly improve the appearance of minimal to more severe wrinkles. These facial fillers and facial injectables can raise your eyebrows and mouth corners and work to eliminate the vertical bands that may be present in your neck.

Facial injectables are also a great solution for thinner lips, recessed scars and creating fuller contours in the face.

With several combinations of injectable treatments, Dr. Talei can give you natural, rejuvenated results with no downtime. In fact, most patients only see mild swelling or bruising, and they can resume normal activities almost right away.
